### Academic Projects

#### PrettyTable

🔗 [github.com/prettyTable](https://github.com/prettyTable)

Python API Data Visualization prettyTable

- PrettyTable is a console data display application using the prettyTable library in python.
- Recovering data from an API, analyzing this data and displaying it in a more visible table.
- During this project I was able to develop my knowledge of how to retrieve data from an API in Python, analyze it, understand the queries, filter them, return and display the data important to the compass in a table visible and readable enough.

#### Movie App Database

🔗 [github.com/movie-app](https://github.com/movie-app)

SQLite SQL Queries Database

- Collaborated with colleagues to develop a database for a big application using the language SQLite, and during this project we have chosen to develop a movie app.
- Our database includes 9 tables. For actors, movies, directors, ratings, reviews and more.
- This database allows to search, filter and query data using SQL Queries.
- ✦ Selected as the best SQLite project during database seminary with the highest number of votes.

#### TelBook

🔗 [github.com/bruxx-6243/telbook](https://github.com/bruxx-6243/telbook)

C++ Телефон книга

- TelBook is a console application for creating and storing user register data using the C++ programming language.
- This is an academic project on registers in C++.

### Accomplishments

- Achieved my bachelor's degree at the top 3 of my faculty with the best project.
- I finished top of my class, first in the school at the high school and in the top 5 of the best students in the whole of the Congolese territory at the baccalaureate 2017.
